jQuery Quiz

Objectives:
- To get hands-on experience on JavaScript and jQuery.
- To learn how to work with binding events to the controls in JavaScript.
- To learn how to download jQuery library and refer it to the Html page.
- To learn the importance of $(document).ready(function(){ });
- To learn selecting the Html elements by name, attribute name, id or by content.
- To Learn Traversing of Html elements.
- To learn handling different events for different Controls.
- To learn how to provide effects to the elements or sections in the Html page.
- To learn manipulating elements by adding CSS classes dynamically, by inserting Elements.

* Indicates required question

1. Email *

2. Name:- *

3. Roll Number: *

4. **Which of the following jQuery selector selects all elements available in a DOM?(CO1)** * 2 points

Check all that apply.

- [ ] $('*')
- [ ] $('?')
- [ ] $('#')
- [ ] None of the above

5. **Which of the following jQuery method adds the specified class if it is not present, remove the specified class if it is present?(CO2)** * 2 points

Check all that apply.

- [ ] toggleStyleClass(class)
- [ ] toggleClass(class)
- [ ] toggleCSSClass(class)
- [ ] None of the above

6. **Which of the following jQuery method set the value of an element? (CO3)** * 2 points

Check all that apply.

- [ ] setContent(val)
- [ ] val(val)
- [ ] setValue(val)
- [ ] None of the above

7. **jQuery is a -(CO1)** * 2 points

Check all that apply.

- [ ] JavaScript method
- [ ] JSON library
- [ ] JavaScript library
- [ ] PHP method

8. **Which of the following sign is used as a shortcut for jQuery?(CO2)** * 2 points

Check all that apply.

- [ ] the % sign
- [ ] the & sign
- [ ] the $ sign
- [ ] the @ sign

9. **$(this) in jQuery is used when -(CO3)** * 2 points

Check all that apply.

- [ ] $(this) in jQuery is used when -
- [ ] an HTML element references its own action
- [ ] an HTML element references the action of its parent element
- [ ] All of the above

10. **Which of the following jQuery method is used to hide the selected elements?(CO1)** * 2 points

Check all that apply.

- [ ] The hidden() method
- [ ] The hide() method
- [ ] The visible(false) method
- [ ] The display(none) method

11. **Which jQuery method is used to set one or more style properties to the selected element?(CO2)** * 2 points

Check all that apply.

- [ ] The html() method
- [ ] The style() method
- [ ] The css() method
- [ ] All of the above

12. **The correct syntax to set the background color of all h1 elements to yellow in jQuery -(CO3)** * 2 points

Check all that apply.

- [ ] $("h1").style("background-color","yellow");
- [ ] $("h1").html("background-color","yellow");
- [ ] $("h1").css("background-color","yellow");

13. **The jQuery method used to get all ancestors of the matched set of elements is -(CO3)** * 2 points

Check all that apply.

- [ ] parents() method
- [ ] parent() method
- [ ] offsetParent() method
- [ ] None of the above

jQuery is a lightweight, "write less, do more", JavaScript library. The purpose of jQuery is to make it much easier to use JavaScript on your website. jQuery takes a lot of common tasks that require many lines of JavaScript code to accomplish, and wraps them into methods that you can call with a single line of code.

The main advantage of using jQuery is that it is a lot more easy to use when compared to any other javascript libraries. It supports Ajax and lets you develop the templates easily. Through some jQuery effects that are almost identical to flash, the major advantage of jQuery is that it can be optimized in terms of SEO

Role and Importance of JQuery In The Web Development. JQuery : It is a compact, swift and feature rich JavaScript library. It makes things like HTML document traversal and manipulation, event handling, animation, and Ajax much simpler with an easy-to-use API that runs across large number of browsers.

dynamic website

Nothing

Jquery is a light weight, " write less, do more", javascript library. The purpose of journey is to make it much easier to use javascript on your website.

jQuery takes a lot of common tasks that require many lines of JavaScript code to accomplish and wraps them into methods that we can call with single line of code

C

It help in developing new website

jQuery is quite popular with website developers because of its simplicity and ease of use. Anyone can use this language in their applications without worrying about any licensing or compatibility issues. Search engines like Google use page load time as a key factor when ranking websites.

jQuery is quite popular in website developers because of its simplicity and ease of use. Anyone can use this application without worrying about licensing and compatibility issues.

JQuery is very popular within website developers because it is simple and easy to use. Search engines like Google use page load time as a key factor when ranking websites

1. jQuery has make much easier to use javascript. 2. It has large Library so that lots of functions can be compared to javascript.3. Faster development of application can be done as there's strong opensource community

J Query is an open-source javascript library that simplifies the interaction between an HTML/CSS documents, or more precisely the Documents Object Model (DOM), and JavaScript. Elaborating thr terms, jQuery simplifies HTML documents traversing and manipulation, browsebrowser JavaScript development.

1. Highly extensible The primary jQuery library has been created to be kept tight and focused and this eliminates all non-essential features. However, there is a plugin framework that is available to make it easy for developers to extend jQuery. Programmers can make use of official jQuery plugins and thousands of other third-party plugins. This means that your business website will only download the necessary features that it needs. In case you need additional features that are not included, then you can download them online. 2. Pages load faster Google and other search engines use page loading time as an important factor that affects search engine optimization. Therefore, web developers must ensure that their code is light and as concise as possible. jQuery files are normally stored separately from the webpages. This enables developers to make any modifications to the whole website with the use of a single centralized repository instead of searching through countless folder structures. 3. Beautiful and clean syntax jQuery uses clean, simple, and powerful syntax that makes it easy to select the DOM elements on the website page. When developing websites, you will need to learn how to separate your scripts from your page presentation code. Because of how jQuery is created, it is easy for you to hook elements and even attach code to webpages that are similar to CSS. Your final markup will be separate from the scripting code whenever you use this web design technique. 4. It is popular jQuery is very popular with programmers and website developers because of its ease of use and simplicity. You can easily get lots of information and resources about jQuery on the internet. With this web development technique, you will never lack resources and you will find whatever you require and have all your questions answered when working this popular language. 5. Encourages simplicity Most website developers usually find jQuery to be lean and easy because the library has been built using shorter and simpler code. With the simple syntax and open coding, web designers can easily shorten the time that is needed to deploy a website or application. When using jQuery, programmers do not have to be experts in their field for them to come up with excellent websites styles. Web developers who have done testing and coding of CSS files will appreciate how easy jQuery implementation is. 6. Mean and lightweight To ensure that jQuery library remains lightweight and lean, most functions have been eliminated, while others have been transferred to the plugin section. If you need any of the omitted features, you can easily add them to your business website as plugins. This lean library helps to keep the coding at a limited level and saves on bandwidth to ensure faster loading. The main jQuery library is just 24kb and is smaller than most photographs on the webpages. For excellent web design and SEO services, consider omegaseo.co. 7. Cross-browser compatibility Another important characteristic benefit of using jQuery is the fact that it can handle lots of cross-browser bugs and problems that are experienced while programming with JavaScript. Handling cross-browser issues in web development can be quite a challenging experience. This is because you may find web design elements working perfectly in one browser and breaking down completely in another browser. The jQuery library deals with most of these cross-browser issues. This means that you will develop a website that can work properly in all browser types and versions and this saves you a lot of trouble. 8. Utility features jQuery provides lots of utility functions that assist in coding string iteration, array manipulation, trimming, and other features. These functions help in providing a seamless assimilation between jQuery and JavaScript. With these key utility features, the entire coding process will be easier and hassle-free. Website developers need to learn jQuery because with the comprehensive tutorials and documentation, they can create excellent websites regardless of whether they are experts or beginners in this field. 9. jQuery mobile effects are better jQuery is undeniably a newly

developed computer program and comes with better adaptability for mobile versions when compared to flash program. Most mobile operating systems are not compatible with the flash created animations. However, with jQuery, the animations created are seamlessly supported by all browsers and mobile operating systems. Most mobile devices have limited resources and may not be compatible with technologies that take up multiple resources, and this is why most mobile devices will support animations created in jQuery over those created using Flash. 10. jQuery has tremendous SEO benefits One of the key reasons why Flash is rejected by the users and search engines alike is because if a browser is not Flash-enabled, then any Flash-based graphics will not load. On the other hand, jQuery elements will still render even when JavaScript is disabled. This means that you can still display your animations while being SEO-friendly. Furthermore, the faster loading pages of jQuery will help to boost your website rankings even further. There are also lots of plugins that you can use to optimize your jQuery website for SEO, for example, tags on on-page elements, Meta descriptions, and proper titles. 11. It is open source jQuery has its own open source community that gives users lots of crucial advantages. This website design technique is free to use and you will not have to spend cash on costly licenses whenever you want to incorporate it into your website. Whenever you encounter any complicated issues, the community will be there to help you come up with a viable solution. There are also countless plugins available to help you customize your programming experience and get whatever you need to keep your website up and running effectively.

makes it much easier to use JavaScript on your website. jQuery takes a lot of common tasks that require many lines of JavaScript code to accomplish, and wraps them into methods that you can call with a single line of code. jQuery also simplifies a lot of the complicated things from JavaScript, like AJAX calls and DOM manipulation.

Many companies, including the big names listed above, have used jQuery in their code, meaning that they need developers who understand jQuery to maintain their apps.

1.it has large library so that lost of function can be compare to the javascript. 2.it is easy to use javascript because of jquery. faster development of applications can be done.

jQuery makes web development easier to use by providing a number of 'helper' functions. These help developers to quickly write DOM (Document Object Model) interactions without needing to manually write as much JavaScript themselves.

jQuery is a light weight and also known as 'write less, do more' JavaScript Library. As it will help many IT sector Web technologies as it's main purpose is to make it much more easier to use JavaScript on your Website.

The purpose of jQuery is to make it much easier to use JavaScript on your website

Well J query is like 'Write less and Do more' and thats what is really needed nowadays,Easy coding but effective output.

JQuery is a lightweight write less do more javascript library

It is widely used to build websites.

jQuery is a JavaScript library designed to simplify HTML DOM tree traversal and manipulation, as well as event handling, CSS animation, and Ajax. It is free, open-source software using the permissive MIT License. As of May 2019, jQuery is used by 73% of the 10 million most popular websites.

The purpose of jQuery is to make it much easier to use JavaScript on your website. jQuery takes a lot of common tasks that require many lines of JavaScript code to accomplish, and wraps them into methods that you can call with a single line of code. jQuery also simplifies a lot of the complicated things from JavaScript, like AJAX calls and DOM manipulation.

jQuery is a lightweight, "write less, do more", JavaScript library. The purpose of jQuery is to make it much easier to use JavaScript on your website.jQuery also simplifies a lot of the complicated things from JavaScript, like AJAX calls and DOM manipulation.The main advantage of using jQuery is that it is a lot more easy to use when compared to any other javascript libraries. It supports Ajax and lets you develop the templates easily. Through some jQuery effects that are almost identical to flash, the major advantage of jQuery is that it can be optimized in terms of SEO.

jQuery is the most widely-used JavaScript library, and is used in more than half of all major websites

JQuery is a lightweight, "write less, do more", JavaScript library. The purpose of Jquery is to make it much easier to use JavaScript on your website. So in IT industries people can get easy results.

jQuery is a lightweight, "write less, do more", JavaScript library.

Because it is a lot more easy to use

J query is a java script library designed to simplify html dom tree traversal and manipulation,as well as event handling,css,animation

Jquery makes things like html document traversal, event handling and manipulaton ,event handling ,animation and ajax much simpler.

J query makes things like HTML document traversel, event handling and manipulation event handling animation and ajax much simpler .

Jquery makes things like html document traversal, event handling and manipulation, event handling, animation and ajax much simpler.

JQuery is excellent for developing dynamic web pages. It allows the developers to create plugins that would work on top of the JavaScript library

jQuery is fully compatible with all web browsers, which is a major relief for web developers because now they do not have to worry about the efficiency standards regardless of whether they are coding for Chrome, Firefox, or Opera. It is a lot more easy to use when compared to any other javascript libraries.

JQuery is excellent for developing dynamic web pages. It allows the developers to create plugins that would work on top of the JavaScript library. Many people continue to learn it before they advance to frameworks and many other tools implement some features from it.

Role and importance of jquery in the web development

jQuery is a JavaScript library designed to simplify HTML DOM tree traversal and manipulation, as well as event handling, CSS animation, and Ajax.

jQuery is a lightweight, "write less, do more", JavaScript library. The purpose of jQuery is to make it much easier to use JavaScript on your website.

jQuery is a lightweight, "write less, do more", JavaScript library. The purpose of jQuery is to make it much easier to use JavaScript on your website.jQuery also simplifies a lot of the complicated things from JavaScript, like AJAX calls and DOM manipulation.

jQuery mainly reduces the no.of line code and easy to understand the users.

Get required outcome in short line of code compare to other library ies

jQuery is a lightweight, "write less, do more", JavaScript library. The purpose of jQuery is to make it much easier to use JavaScript on your website. jQuery takes a lot of common tasks that require many lines of JavaScript code to accomplish, and wraps them into methods that you can call with a single line of code so this is the importance of jquery .

Speed things up.majes a website look more professional.

J Query make it much easier to use javascript on your website .It helps to simplify and standardize interactions between javascript code and HTML elements. Websites become interactive and dynamic

The Advantage of using jQuery is that it is a lot more easy to use when compared to any other javascript libraries. It supports Ajax and lets you develop the templates easily. The major advantage of jQuery is that it can be optimized in terms of SEO

It is a compact, swift and feature rich JavaScript library. It makes things like HTML document traversal and manipulation, event handling, animation, and Ajax much simpler with an easy-to-use API that runs across large number of browsers. With a combination of versatility and extensibility, JQuery has changed the way that millions of people write JavaScript.

jQuery is a JavaScript library designed to simplify HTML DOM tree traversal and manipulation, as well as event handling, CSS animation, and Ajax. It is free, open-source software using the permissive MIT License. As of May 2019, jQuery is used by 73% of the 10 million most popular websites. Web analysis indicates that it is the most widely deployed JavaScript library by a large margin, having at least 3 to 4 times more usage than any other JavaScript library.

jQuery is an open-source JavaScript library that simplifies the interactions between an HTML/CSS document, or more precisely the Document Object Model Doman Do JavaScript

JQuery is an open source JavaScript library that simplifies the interaction between HTM/CSS document, aur precisely the document object model doman do javascript

Role and importance of jQuery in Web development. jQuery : It is compact swift and feature rich JavaScript library. It makes things like HTML document traversal and manipulation, event handling, animation, and Ajax much simpler with an easy to use API that runs across large numbers of browser.

jQuery is an open source JavaScript library that simplifies the interactions between an HTML/CSS document, or more precisely the Document Object Model (DOM), and JavaScript.

It helps to simplify and standardize interactions between JavaScript code and HTML elements.

jQuery makes use of powerful, clean, and simple syntax that makes it easier to pick the DOM elements on the webpage that you want to change with JavaScript and enable you to chain effects and actions together for effective code.

jQuery is a JavaScript library designed to simplify HTML DOM tree traversal and manipulation, as well as event handling, CSS animation, and Ajax.It is free, open-source software using the permissive MIT License. As of May 2019, jQuery is used by 73% of the 10 million most popular websites.[5] Web analysis indicates that it is the most widely deployed JavaScript library by a large margin, having at least 3 to 4 times more usage than any other JavaScript library.
