## **What is Organ Donation?**

Organ Donation is a life transforming gift of an Organ to a person who has and end stage organ disease and needs a transplantation for survival .Sometimes people suffer from irreversible organ failures and the only way they can recover or lead a normal life is to receive an organ transplant which can be done only through organ donation.

Accordingly to World Health Organization (WHO) only about 0.01% in India donate their organs after death. There is major lack awareness about organ donations and recent polls and surveys reveal that people would come forth genuinely if they had received more information.

A major reason for the shortage of organs is that many people have not expressed & recorded their wish about organ donation or discussed it with their families.
